Operation Guide

1) Write games to SD card

Download [WBFS Manager](#) and use it to write .iso games to an SD card using your PC.

2) Play!

Insert the SD card into the Wiickey Fusion card reader and start up the Wii.

You will see that the disc channel shows a GameCube game. Launch it.

The Wiickey menu will load. Use the reset button (quick press) to move from game to game (or to the config option)

When you have chosen the game you want, press the reset button (long press) and the Wii will restart. When it finishes restarting, your chosen game will appear in the disc channel. Launch it and it will play.

If you have a GameCube controller, you can use that instead of the reset button.

To switch games, go to the disc channel and press the 'eject' button on the front of your Wii.

FAQ

My games from other regions do not work, or have stopped working

Applies to: Wiickey Fusion

Check your system Menu version. Starting from System Menu 4.2 and onwards a new method of detecting region is used, which cannot be bypassed by Wiickey. The detection is done in such a way that it is no longer possible to achieve region override. This applies to both original discs and backups, regardless of media.

What is Error #002, and how can I fix it?

Applies to: Wiickey Fusion

Error 002 means the Wii system needs to be updated. Some games come bundled with an update for the Wii system. If the Wii needs updating, the update must be installed before the game can be started. However, if the Wii cannot see the update partition because the brickblocker feature is set to block all updates, or if a 'scrubbed' game image where the update partition has been removed is used, the Wii will allow the game to start, resulting in Error 002.

One solution is to install the system update, provided that the game is of the same region as your Wii. Installing updates from other regions may brick your Wii, so make sure the game you are using to update is from the same region.

Note that installing updates can sometimes have undesirable results, such as the removal of region free capabilities with System Menu 4.2 or higher.
